If i opened each document, find out it's content and manually rename it and move it to appropriate folder (different to each file), I needed years of hard work. But Haizon File Renamer had done all job for me - it's look like a miracle!"David Lloid, Scientific Atlanta, Inc. Chief engineer Our mission

Today life is impossible to imagine without information, and information - without files. By reports, provided by independent researches, now more than 95% of information is stored in files.

In 1970's, when first floppy disk was invented, it had 0,1 Megabyte size and often hold up to 15 files. In 1980's was invented CD disk, that already had 500 Megabyte size and could hold already thousands of files. In 1990's became popular DVD disks, that could carry already dozens of thousands of files. Today most of files are stored on HDD (Hard Disk Drives), that are presented in every computer. They have size beginning from 80 000 Megabyte and hold millions of documents.

Several weeks ago was already started production of Hard disk with 470 000 Megabytes size, that is able to store already milliards of documents in variety of formats.

When on a computer are stored such variety of files, especially if they are packed in numerous of archives, it is extremely hard to navigate between them. People often don't know, what files and where are stored.

When in a folder several hundreds, or even thousands of files with names like "640info.txt", "important(12).doc", "mp312.rar", "confer64.avi", "d12.zip" it will be needed days, or even weeks and months to understand, what is what, rename all and move all in folders, according to content.

A whole directories are deleted, cause there is no possibility to find out, what is inside and use such content.

You are in the danger! Is any solvation of such heavy situation? Yes, and it is - HaizonRenamer.
